<tr>
<td>DX Local Dual User Unit (2xHD15 + 2xPS/2 + 2xSerial)</td>
<td></td>
</tr>
</tbody>
</table>

DXU is a local user unit that provides local console access to the DX KVM Central Unit.

### DXU LOCAL PS/2 USER UNIT

- **DX Local Dual User Unit (2xHD15 + 2xPS/2 + 2xSerial)**

The DX is a matrix management system for the data centre environment. The multi-user system centralizes and secures out-of-band access to servers and network devices. It unifies management of KVM access, serial control, power management and user administration. The DX is powered by Minicom’s Advanced Integrated Management Interface, a hardware embedded software with a windowed GUI that provides point and click management of all KVM and Serial hardware in the data centre.

**Analog/Digital capability**

The DXU user enables analog KVM capability up to a distance of 100M from the DX central unit. The optional DXU IP II user unit enables remote digital KVM IP capability from anywhere in the world supporting 128-bit SSL security standards.

### FEATURES

- Unified KVM/Serial control over servers, devices and users
- Point and click management of all KVM and Serial hardware in the data centre
- Visual overview of dozens of servers in a pure hardware solution
- Non blocking 4-8 user matrix switching
- Cascades with additional DX and KVM systems for control over hundreds of servers
- Multiple layer security protection

### DX Local + Remote Access IP User Unit (Optional)
