### OVERVIEW

The SMC6152L2 provides wire speed 10/100 Fast Ethernet switching with features specifically designed for SMB workgroup environments. The switch has 4 built in Gigabit ports providing enhanced uplink capabilities. An integrated part of this switch family is the IP Clustering function. The feature allows customers to group together up to 32 switches into a single logical group which can be managed using a single IP address. The switch features advanced Quality of Service features that can reduce the latency of packets through the network, with specific traffic prioritization improving the delivery of converged data such as voice and high quality video over IP. Other standard features included are Spanning Tree and IGMP for protecting your network against loops and managing your IP multicasts enhances the productivity and problem free networking. The gigabit ports are 4 Combo gigabit ports (RJ-45/SFP). Overall this switch is part of flexible switch family which brings PoE and non-PoE switches to the edge of the network.
