Wireless Access Point
IEEE 802.11g/b AP with 5 Port 10/100M Switch

IEEE 802.11 g/b Wireless LAN Access Point
Acting as a bridge between the wired Ethernet and the 2.4GHz IEEE 802.11g/b wireless LAN, this wireless LAN access point can let your wireless LAN client stations access both the wired and the wireless network nodes.

WDS Bridge Mode (Repeater Mode)
The WDS (Wireless Distributed System) function let this access point acts as an wireless LAN access point and repeater at the same time. Users can use this feature to build up a large wireless network in a large space like airports, hotels and schools etc. This feature is also useful when users want to bridge networks between buildings where it is impossible to deploy network cable connections between these buildings.

RADIUS Server Built-in
This access point has a built-in RADIUS server that can provide EAP-MD5 authentication. With friendly user interface, you can easily enter username/password of user accounts.

Robust Wireless LAN Security (WPA support)
Except for the basic security control by using ESSID and 64/128/152 bit key length WEP encryption, this access point also supports the advanced security features, like MAC access control, IEEE 802.1x authentication, TKIP and hide ESSID. It provides a total solution for you to build up a secure wireless LAN network environment that can prevent from all kinds of hacker intrusion.

RP-SMA Detachable antenna
This access point provides a standard RP-SMA antenna connector that can let you apply all kinds of high gain antennas. This can help you to enlarge your wireless LAN coverage.

Web Configuration
You can configure this access point through the friendly Web user interface with a browser.
Access Point

Features
• Complies with the IEEE 802.11g/b 2.4GHz specification
• Supports 2.400~2.4835 GHz frequency band, 1~14 channels
• High data rate up to 54Mbps network speed
• Auto rate fallback in case of obstacles or interferences
• Supports point-to-point and point-to-multi point bridge function
• Supports WDS (Wireless Distributed System) repeater mode
• Supports roaming link integrity
• Supports authentication for wireless connectivity based on ESSID
• Provides 64/128/152 bit key length WEP data encryption
• Supports WPA security enhanced function (pre-shared key, 802.1x, TKIP …)
• Provides MAC access control
• Provides hidden SSID function
• Provides RADIUS server with EAP-MD5 authentication function
• Provides DHCP server
• Supports Web-based configuration
• Firmware upgradeable via Web
• Provides RP-SMA detachable antenna that can be easily replaced by an high-gain outdoor antenna
